

CISCO CCNA1
CCNA Routing and Switching: Introduction to Networks

HOOFDSTUK 8

Subnetting IP networks

**DE HOGESCHOOL
MET HET NETWERK**

Hogeschool PXL – Elfde-Liniestraat 24 – B-3500 Hasselt
www.pxl.be - www.pxl.be/facebook

CCNA1 - Overzicht

- OSI model en de belangrijkste (LAN) protocollen.
- Data Flow in een LAN
(verklaring volgens het OSI model).
- IP en **subnetting**.
- Het toepassen en onderzoeken van bovenstaande 3 in Packettrace oefeningen.

Inhoud hoofdstuk 8

8. Subnetting IP networks

Hoofdstuk 8 handelt over het verdelen van een netwerk in subnetwerken. Voor subnetting te begrijpen is het belangrijk dat je de opbouw van een IP adres begrijpt en dat je vlot binair kan tellen.

Doelstellingen:

- De noodzaak van subnetten begrijpen (broadcast domein)
- Berekenen van het aantal geldige host in een netwerk
- Een voor opgegeven netwerk kunnen opsplitsen in verschillende subnetten (VLSM). Geef voor elk subnet het netwerkadres, broadcast adres, range en subnetmask.
- Een netwerk opgesplitst in subnets kunnen berekenen en configureren. (=packettrace oefening!)
- Het verschil kennen tussen subnetten met IPv4 en IPv6

Activity & PT:

- 8.1.4.4 Calculate the subnet mask
- 8.1.4.4 Determining the number of bits to borrow
- 8.1.4.7 PT Subnetting
- 8.1.5.6 Practicing VLSM
- 8.2.1.4 PT Designing and implementing a VLSM addressing
- 8.3.1.4 PT implementing subnetted IPv6 addressing scheme

Leertip:

De packettraceoefening 8.1.5.6 Practicing VLSM is een goede herhaling voor dit hoofdstuk.

Inhoud hoofdstuk 8

Leertip VLSM:

1. Zorg dat je vlot binair kan tellen! (tip: cisco binary game)
2. Oefen ANDing (via de netwerkmask Netwerk- en hostgedeelte berekenen)
3. prefix notatie
4. Aantal geldige host binnen een netwerk berekenen.
5. Begrijp waarom subnetten nodig is en hoe je een netwerk kan opsplitsen
6. Start met eenvoudige oefeningen (8.1.4.4)
7. Oefen VLSM (Subnetten met een variabele subnetgrootte. = PT 8.2.1.4)
8. bekijk de video van Mr. Heyns (Leermaterialen>extra)

Chapter 8:

Subnetting IP networks

Introduction to Networks v5.1

Chapter Outline

- 8.0 Introduction
- 8.1 Subnetting an IPv4 Network
- 8.2 Addressing Schemes
- 8.3 Design Considerations for IPv6
- 8.4 Summary

Section 8.1: Subnetting an IPv4 Network

- 8.1.1 Network Segmentation
- 8.1.2 Subnetting an IPv4 Network
- 8.1.3 Subnetting a /16 and a /8 Prefix
- 8.1.4 Subnetting to Meet Requirements

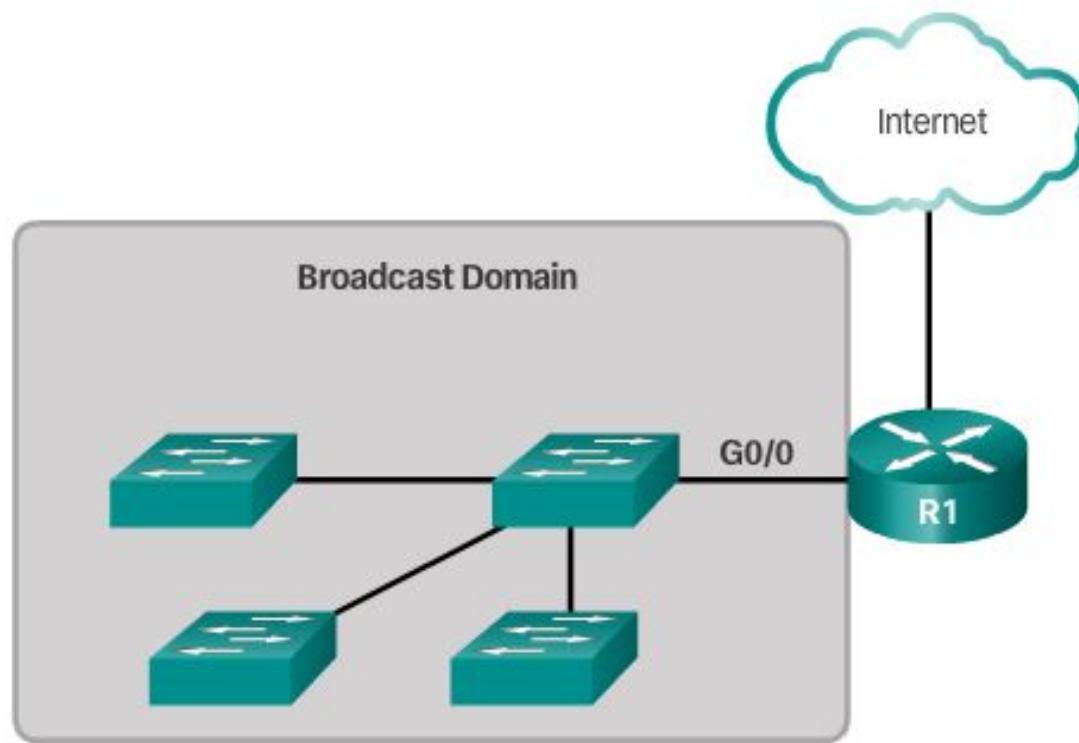

Topic 8.1.1: Network Segmentation

8.1.1 Network Segmentation

8.1.1.1 Broadcast Domains

Each router interface connects a *broadcast domain* and broadcasts are only propagated within its specific broadcast domain.

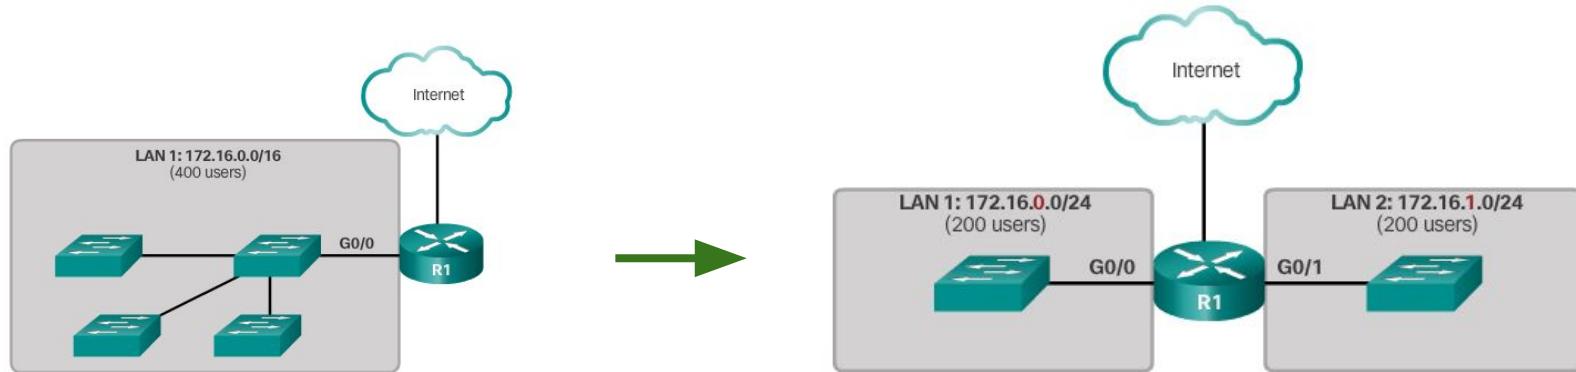

8.1.1 Network Segmentation

8.1.1.2 Problems with Large Broadcast Domains

PROBLEM: Large Broadcast Domains

- **Broadcast traffic** → Slow network operations
- **Broadcast packet** → Slow device operations

SOLUTION: Subnetting

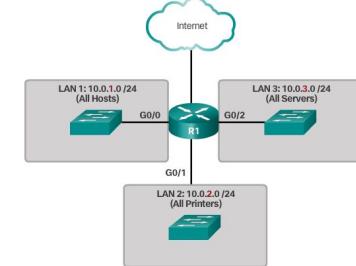

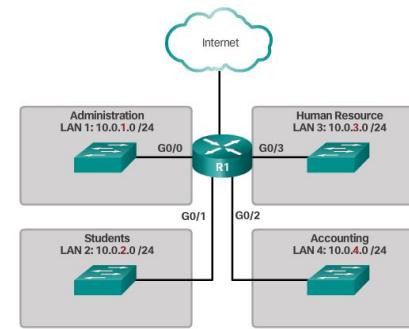

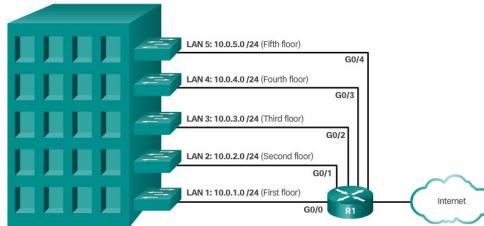

1 Broadcast domain (400 users) → subnetting → 2 Broadcast domains (2*200 users)

8.1.1 Network Segmentation

8.1.1.3 Reasons for Subnetting

Network administrators can group devices and services into subnets that are determined by:

- Location
- Organizational unit
- Device type

Topic 8.1.2: Subnetting an IPv4 Network

8.1.2 Subnetting an IPv4 Network

8.1.2.1 Octet Boundaries

Prefix Length	Subnet Mask	Subnet Mask in Binary (n = network, h = host)	# of hosts
/8	255.0.0.0	nnnnnnnn . hhhhhh . hhhhhh . hhhhhh 11111111 . 00000000 . 00000000 . 00000000	16,777,214
/16	255.255.0.0	nnnnnnnn . nnnnnnnn . hhhhhh . hhhhhh 11111111 . 11111111 . 00000000 . 00000000	65,534
/24	255.255.255.0	nnnnnnnn . nnnnnnnn . nnnnnnnn . hhhhhh 11111111 . 11111111 . 11111111 . 00000000	254

Prefix = # of networkbits.

→ host bits = 32 - networkbits!

$$\text{#of hosts} = (2^{\text{"hosts-bits"}}) - 2$$

$$/8 \rightarrow (2^{24}) - 2 \quad \text{# of hosts} = 16777214$$

$$/16 \rightarrow (2^{16}) - 2 \quad \text{# of hosts} = 65534$$

$$/24 \rightarrow (2^8) - 2 \quad \text{# of hosts} = 254$$

8.1.2 Subnetting an IPv4 Network

8.1.2.2 Subnetting on the Octet Boundary

Example: $10.0.0.0/8$ = internal network address

→ 16.777.214 hosts in one broadcast! ⇒ **Subnet !!**

→ $10.0.0.0/16 - 10.255.0.0/16$
⇒ 256 subnets
⇒ 65.534 host

Subnet Address (256 Possible Subnets)	Host Range (65,534 possible hosts per subnet)	Broadcast
<u>10.0.0.0/16</u>	<u>10.0.0.1</u> – <u>10.0.255.254</u>	<u>10.0.255.255</u>
<u>10.2.0.0/16</u>	<u>10.2.0.1</u> – <u>10.2.255.254</u>	<u>10.2.255.255</u>
<u>10.3.0.0/16</u>	<u>10.3.0.1</u> – <u>10.3.255.254</u>	<u>10.3.255.255</u>
<u>10.4.0.0/16</u>	<u>10.4.0.1</u> – <u>10.4.255.254</u>	<u>10.4.255.255</u>
...
<u>10.255.0.0/16</u>	<u>10.255.0.1</u> – <u>10.255.255.254</u>	<u>10.255.255.255</u>

8.1.2 Subnetting an IPv4 Network

8.1.2.3 Classless Subnetting

Prefix Length	Subnet Mask	Subnet Mask in Binary (n = network, h = host)	# of subnets	# of hosts
/25	255.255.255.128	nnnnnnnn.nnnnnnnn.nnnnnnnn.nhhhhhhh 11111111.11111111.11111111.10000000	2	126
/26	255.255.255.192	nnnnnnnn.nnnnnnnn.nnnnnnnn.nnhhhhhh 11111111.11111111.11111111.11000000	4	62
/27	255.255.255.224	nnnnnnnn.nnnnnnnn.nnnnnnnn.nnnhhhhh 11111111.11111111.11111111.11100000	8	30
/28	255.255.255.240	nnnnnnnn.nnnnnnnn.nnnnnnnn.nnnnhhhh 11111111.11111111.11111111.11110000	16	14
/29	255.255.255.248	nnnnnnnn.nnnnnnnn.nnnnnnnn.nnnnnhhh 11111111.11111111.11111111.11111000	32	6
/30	255.255.255.252	nnnnnnnn.nnnnnnnn.nnnnnnnn.nnnnnngh 11111111.11111111.11111111.11111100	64	2

8.1.2.6 Classless Subnetting Example

192.168.1.0/24 Network

Address	192	168	1	0000	0000
Mask	255	255	255	0000	0000

Network Portion Host Portion

→ Host portion = 8 bits
⇒ #of hosts = $(2^8) - 2 = 254$

8.1.2 Subnetting an IPv4 Network

8.1.2.6 Classless Subnetting Example

Borrow 1 bit from the host portion of the address.

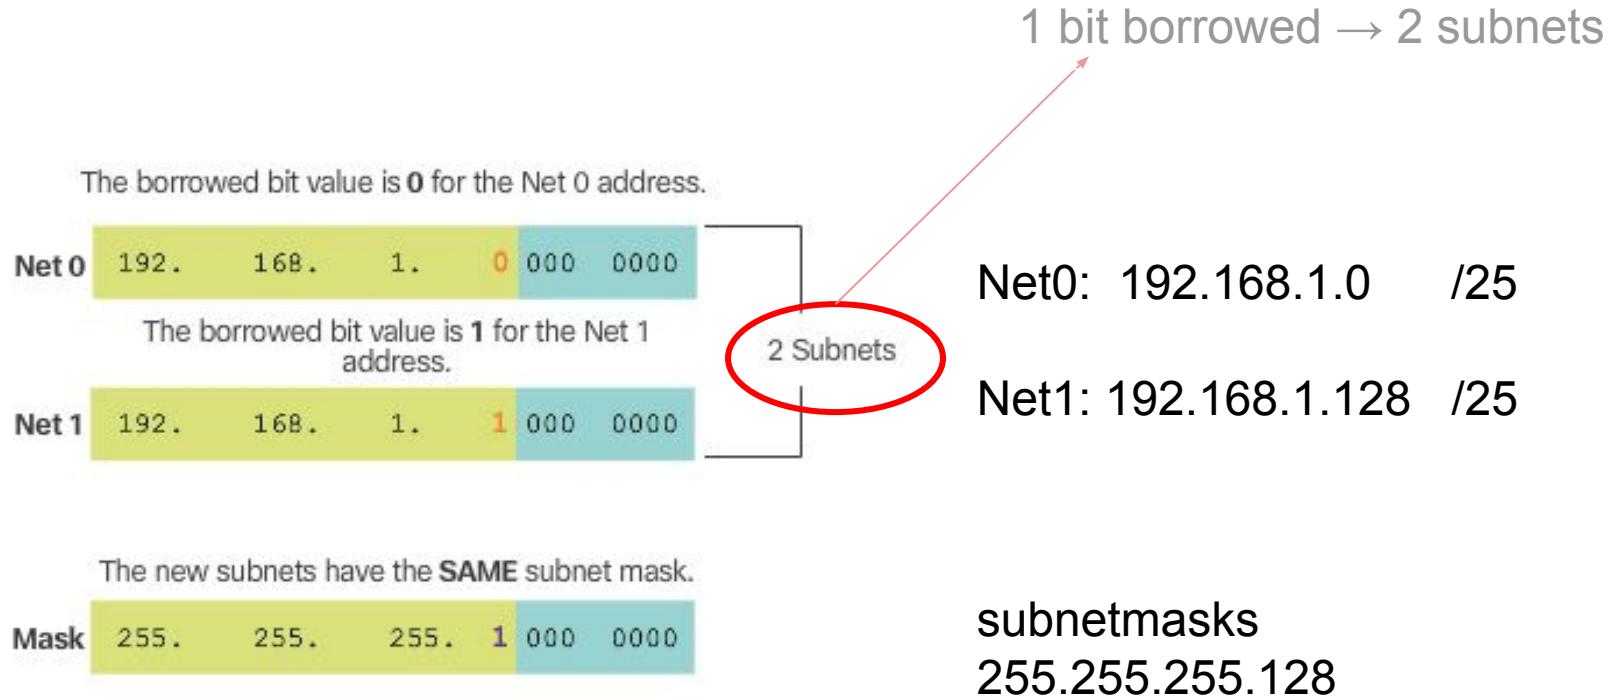

Original	192.	168.	1.	0	000	0000
Mask	255.	255.	255.	0	000	0000

→ borrow 1 bit $\Rightarrow 1^2 = 2$ subnets
→ Host portion = 7 bits
 $\Rightarrow \# \text{ of hosts} = (2^7) - 2 = 126$

8.1.2 Subnetting an IPv4 Network

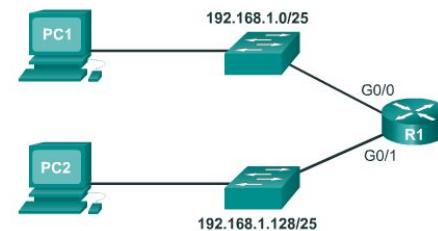

8.1.2.6 Classless Subnetting Example

8.1.2 Subnetting an IPv4 Network

8.1.2.7 Creating 2 Subnets

/25 Subnetting Topology

Address Range for 192.168.1.0/25 Subnet

Network Address

192. 168. 1. 0 000 0000 = 192.168.1.0 → hostbits all on zero

First Host Address

192. 168. 1. 0 000 0001 = 192.168.1.1 → (hostbits all on zero) + 1

Last Host Address

192. 168. 1. 0 111 1110 = 192.168.1.126 → (hostbits all on 1) - 1

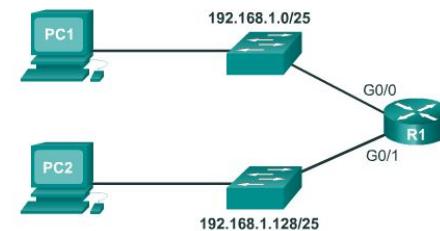

Broadcast Address

192. 168. 1. 0 111 1111 = 192.168.1.127 → hostbits all on 1

8.1.2 Subnetting an IPv4 Network

8.1.2.7 Creating 2 Subnets

/25 Subnetting Topology

Address Range for 192.168.1.128/25 Subnet

Network Address

192. 168. 1. 1 **000 0000** = 192.168.1.128 → hostbits all on zero

First Host Address

192. 168. 1. 1 **000 0001** = 192.168.1.129 → (hostbits all on zero) + 1

Last Host Address

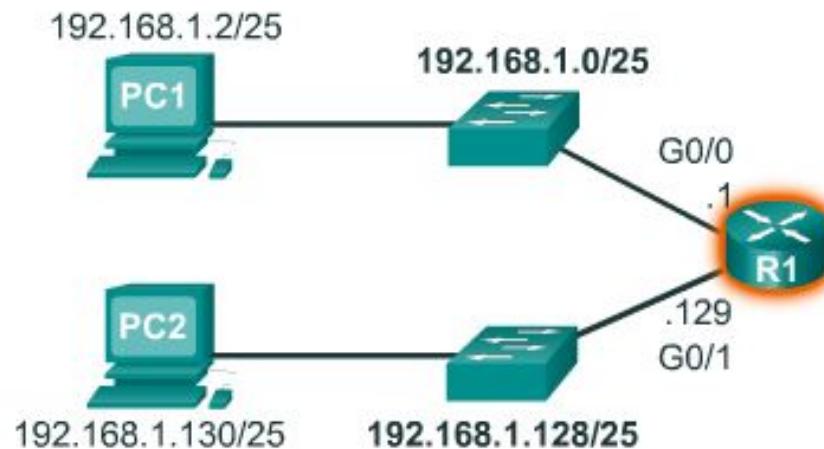

192. 168. 1. 1 **111 1110** = 192.168.1.254 → (hostbits all on 1) - 1

Broadcast Address

192. 168. 1. 1 **111 1111** = 192.168.1.255 → hostbits all on 1

8.1.2.7 Creating 2 Subnets (cont.)

Configure R1 Gigabit Interfaces

```
R1(config)#interface gigabitethernet 0/0
R1(config-if)#ip address 192.168.1.1 255.255.255.128
R1(config-if)#exit
R1(config)#interface gigabitethernet 0/1
R1(config-if)#ip address 192.168.1.129 255.255.255.128
```

8.1.2.9 Subnetting Formulas

To calculate the number of subnets.

$$2^n$$

n = bits borrowed

To calculate the number of hosts.

$$2^{n-2}$$

n = the number of bits remaining in
the host field

8.1.2 Subnetting an IPv4 Network

8.1.2.10 Creating 3 Subnets

Example: 192.168.1.0/24 → 3 subnets !

Borrowing 2 Bits

Borrowing 2 Bits → $2^2 = 4$ subnets

The diagram illustrates the subnetting process for the IP address 192.168.1.0/24. It shows two rows: 'Original' and 'Mask'. The 'Original' row contains the IP address 192.168.1.00 followed by a binary representation of the subnet mask 00 0000. The 'Mask' row contains the subnet mask 255.255.255.00, where the last two digits are highlighted in red. An orange arrow points from the text 'Borrowing 2 Bits' to the red-highlighted digits in the mask. A red oval encloses the text 'Borrowing 2 Bits'.

Original	192.	168.	1.	00	00	0000
	255.	255.	255.	00	00	0000

8.1.2 Subnetting an IPv4 Network

8.1.2.10 Creating 3 Subnets (cont.)

Borrowing 2 bits creates 4 subnets:							
Net 0	192.	168.	1.	00	00	0000	192.168.1.0/26
Net 1	192.	168.	1.	01	00	0000	192.168.1.64/26
Net 2	192.	168.	1.	10	00	0000	192.168.1.128/26
Net 3	192.	168.	1.	11	00	0000	192.168.1.192/26

All 4 subnets use the same mask:

Mask 255. 255. 255. 11 00 0000 Mask:255.255.255.192

8.1.2 Subnetting an IPv4 Network

8.1.2.10 Creating 3 Subnets (cont.)

Address Range for 192.168.1.0/26 Subnet

Network Address

192. 168. 1. 00 00 0000 = 192.168.1.0

First Host Address

192. 168. 1. 00 00 0001 = 192.168.1.1

of hosts =
 $(2^6) - 2 = 62$

Last Host Address

192. 168. 1. 00 11 1110 = 192.168.1.62

Broadcast Address

192. 168. 1. 00 11 1111 = 192.168.1.63

8.1.2 Subnetting an IPv4 Network

8.1.2.10 Creating 3 Subnets (cont.)

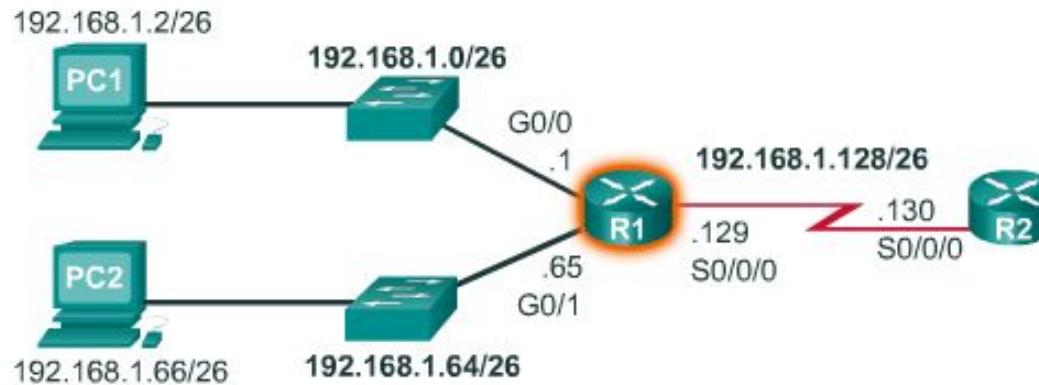

Address Ranges Nets 0 - 2

	Network	192.	168.	1.	00	00	0000	192.168.1.0
Net 0	First	192.	168.	1.	00	00	0001	192.168.1.1
	Last	192.	168.	1.	00	11	1110	192.168.1.62
	Broadcast	192.	168.	1.	00	11	1111	192.168.1.63
Net 1	Network	192.	168.	1.	01	00	0000	192.168.1.64
	First	192.	168.	1.	01	00	0001	192.168.1.65
	Last	192.	168.	1.	01	11	1110	192.168.1.126
	Broadcast	192.	168.	1.	01	11	1111	192.168.1.127
Net 2	Network	192.	168.	1.	10	00	0000	192.168.1.128
	First	192.	168.	1.	10	00	0001	192.168.1.129
	Last	192.	168.	1.	10	11	1110	192.168.1.190
	Broadcast	192.	168.	1.	10	11	1111	192.168.1.191

8.1.2 Subnetting an IPv4 Network

8.1.2.10 Creating 3 Subnets (cont.)

Configuring the Interfaces with /26 Addresses

```
R1(config)#interface gigabitethernet 0/0
R1(config-if)#ip address 192.168.1.1 255.255.255.192
R1(config-if)#exit
R1(config)#interface gigabitethernet 0/1
R1(config-if)#ip address 192.168.1.65 255.255.255.192
R1(config-if)#exit
R1(config)#interface serial 0/0/0
R1(config-if)#ip address 192.168.1.129 255.255.255.192
```

Topic 8.1.3: Subnetting a /16 and a /8 Prefix

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.1 Creating Subnets with a /16 prefix

Prefix Length	Subnet Mask	Network Address (n = network, h = host)	# of subnets	# of hosts
/17	255.255.128.0	nnnnnnnn.nnnnnnnn. n hhhhhhh.hhhhhhhh 11111111.11111111. 1 0000000.00000000	2	32564
/18	255.255.192.0	nnnnnnnn.nnnnnnnn. nn hhhhhhh.hhhhhhhh 11111111.11111111. 11 000000.00000000	4	16282

/25	255.255.255.128	nnnnnnnn.nnnnnnnn. nnnnnnnn . n hhhhhhh 11111111.11111111. 11111111 .10000000	512	126
/26	255.255.255.192	nnnnnnnn.nnnnnnnn. nnnnnnnn . nn hhhhhhh 11111111.11111111. 11111111 . 11 0000000	1024	62
/27	255.255.255.224	nnnnnnnn.nnnnnnnn. nnnnnnnn . nnn hhhhhhh 11111111.11111111. 11111111 . 111 00000	2048	30

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.2 Creating 100 Subnets with a /16 Network

Network:

172 . 16 . 0 . 0
nnnnnnnn.nnnnnnnn.hhhhhh.hhhhhh

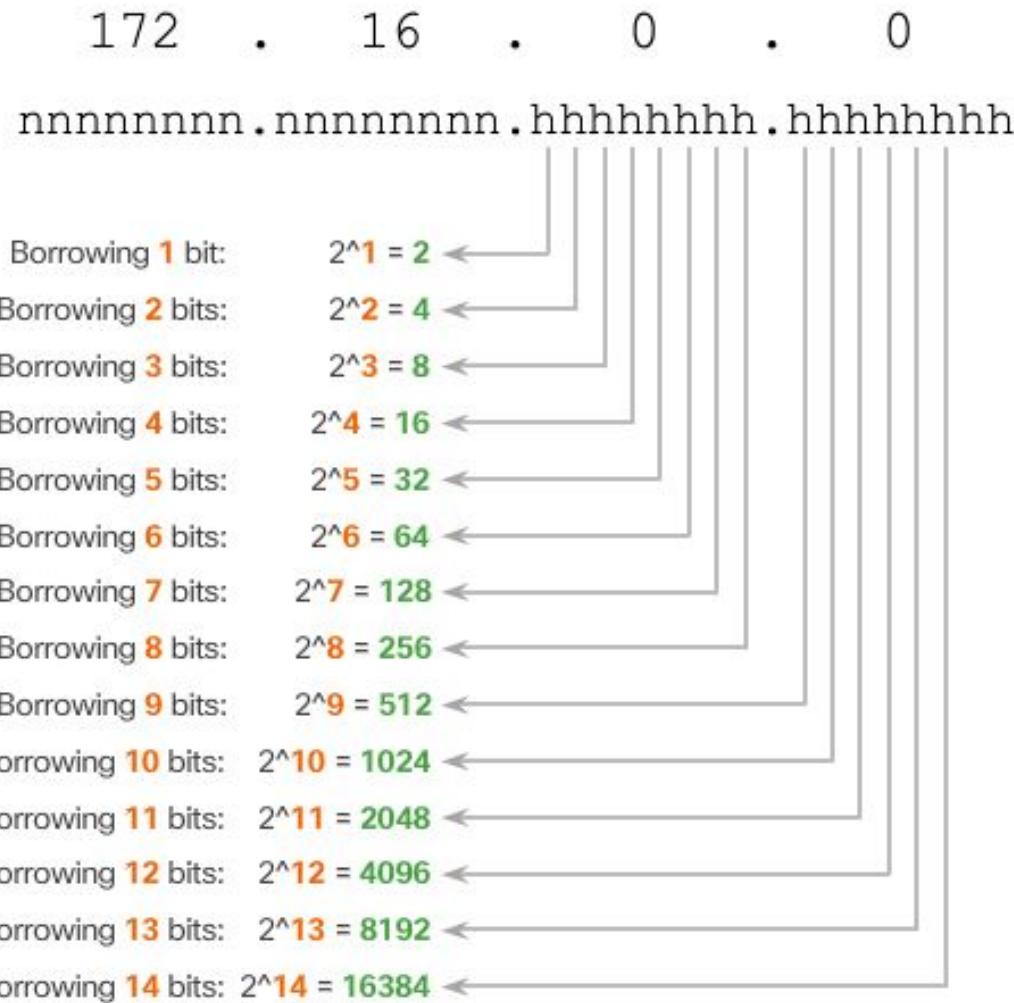

Question: how to create 100 subnets??

→ How many bits to borrow to create 100 subnets?

→ nr of subnets = $2^{\text{borrowed bits}}$

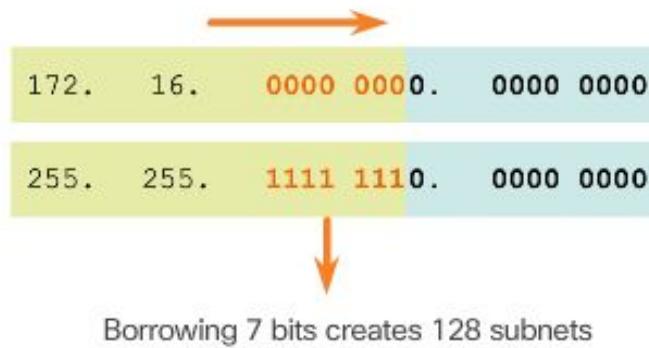

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.2 Creating 100 Subnets with a /16 Network

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.2 Creating 100 Subnets with a /16 Network

→ borrowing 7 bits → /23 network

172. 16. 0000 0000 . 0000 0000	172.16.0.0/23
172. 16. 0000 0010 . 0000 0000	172.16.2.0/23
172. 16. 0000 0100 . 0000 0000	172.16.4.0/23
... to ...	
172. 16. 1111 1110 . 0000 0000	172.16.254.0/23

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.3 Calculating the Hosts

Address Range for 172.16.0.0/23 Subnet

Network Address

172. 16. 00 00 00 00. 0000 0000 = 172.16.0.0/23

First Host Address

172. 16. 00 00 00 00. 0000 0001 = 172.16.0.1/23

9 bits remain in host field

Last Host Address

172. 16. 00 00 00 01. 1111 1110 = 172.16.1.254/23

$2^9 = 512$ hosts per subnet
 $2^9 - 2 = 510$ valid hosts per subnet

Broadcast Address

172. 16. 00 00 00 01. 1111 1111 = 172.16.1.255/23

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.5 Creating 1000 Subnets with a /8 Network

Question: how to create 1000 subnets !!

How many bits to borrow to create 100 subnets?
→ nr of subnets = $2^{\text{borrowed bits}}$

8.1.3 Subnetting a /16 and a /8 Prefix

8.1.3.5 Creating 1000 Subnets with a /8 Network

Address Range for 10.0.0.0/18 Subnet

Network Address

10. 00 00 00 00. 0000 0000. 0000 0000 = 10.0.0.0/18

First Host Address

10. 00 00 00 00. 0000 0000. 0000 0001 = 10.0.0.1/18

14 bits remain in host field

Last Host Address

10. 00 00 00 00. 0011 1111. 1111 1110 = 10.0.63.254/18

2^{14} = 16384 hosts per subnet
 $2^{14} - 2$ = 16382 valid hosts per subnet

Broadcast Address

10. 00 00 00 00. 0011 1111. 1111 1111 = 10.0.63.255/18

Topic 8.1.4: Subnetting to Meet Requirements

8.1.4 Subnetting to Meet Requirements

8.1.4.1 Subnetting Based on Host Requirements

Two considerations when planning subnets:

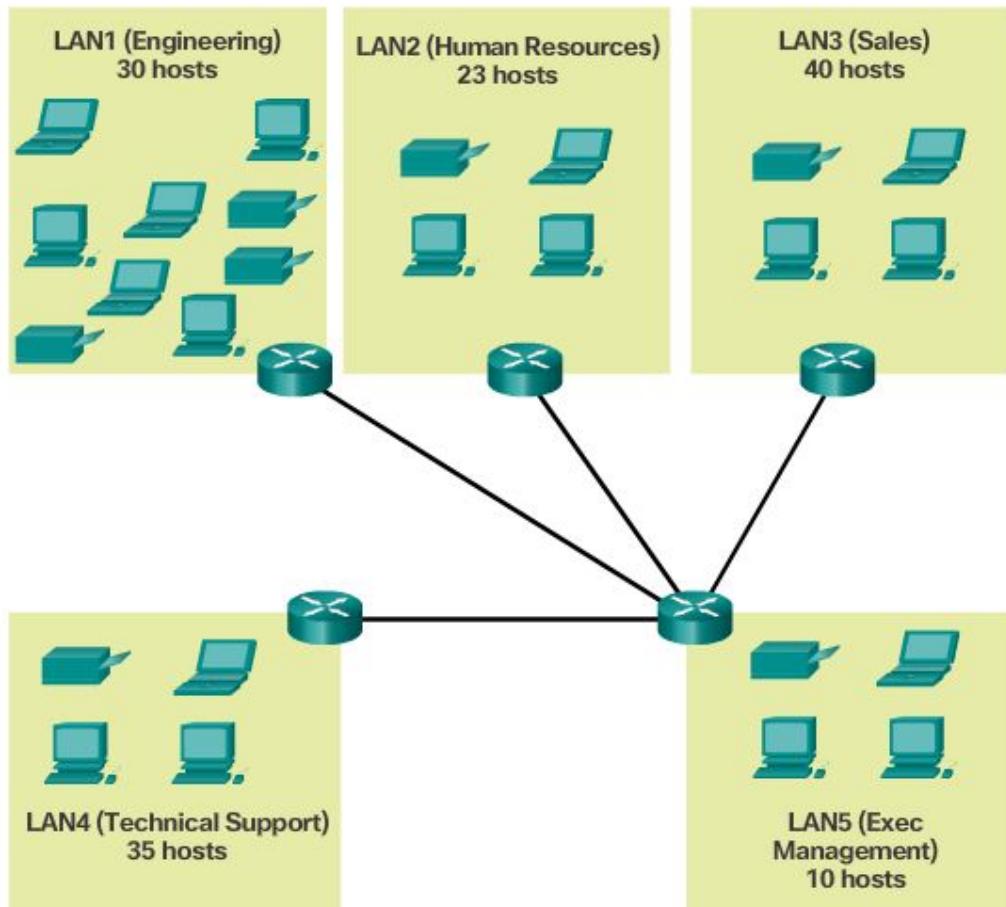

- The number of host addresses required for each network.
- The number of individual subnets needed.

The more bits borrowed to create subnets, the fewer host bits available.

8.1.4 Subnetting to Meet Requirements

8.1.4.3 Network Requirement Example

Corporate Network

8.1.4 Subnetting to Meet Requirements

8.1.4.3 Network Requirement Example

	Network Portion	Host Portion	Dotted Decimal
	10101100.00010000.000000	00.00 000000	172.16.0.0/22
0	10101100.00010000.000000	00.00 000000	172.16.0.0/26
1	10101100.00010000.000000	00.01 000000	172.16.0.64/26
2	10101100.00010000.000000	00.10 000000	172.16.0.128/26
3	10101100.00010000.000000	00.11 000000	172.16.0.192/26
4	10101100.00010000.000000	01.00 000000	172.16.1.0/26
5	10101100.00010000.000000	01.01 000000	172.16.1.64/26
6	10101100.00010000.000000	01.10 000000	172.16.1.128/26
Nets 7 - 13 not shown			
14	10101100.00010000.000000	11.10 000000	172.16.3.128/26
15	10101100.00010000.000000	11.11 000000	172.16.3.192/26

4 bits borrowed from host portion to create subnets

8.1.4 Subnetting to Meet Requirements

8.1.4.3 Network Requirement Example (cont.)

172.16.0.0/22

8.1.4 Subnetting to Meet Requirements

8.1.4.4 Activity – Calculate the Subnet Mask

Subnet Mask	255	255	224	0
Subnet Mask in binary	11111111	11111111	11100000	00000000
Prefix notation	11111111	11111111	11100000	00000000
Subnet Mask	255	255	255	192
Subnet Mask in binary	11111111	11111111	11111111	11000000
Prefix notation	11111111	11111111	11111111	11000000
Subnet Mask	255	255	128	0
Subnet Mask in binary	11111111	11111111	10000000	00000000
Prefix notation	11111111	11111111	10000000	00000000

8.1.4 Subnetting to Meet Requirements

8.1.4.4 Activity – Calculate the Subnet Mask

Subnet Mask	255	255	224	0
Subnet Mask in binary	11111111	11111111	11100000	00000000
Prefix notation	/19			

Subnet Mask	255	255	255	192
Subnet Mask in binary	11111111	11111111	11111111	11000000
Prefix notation	/26			

Subnet Mask	255	255	128	0
Subnet Mask in binary	11111111	11111111	10000000	00000000
Prefix notation	/17			

8.1.4 Subnetting to Meet Requirements

8.1.4.4 Activity – Determining the Number of Bits to Borrow

Hosts Needed	Subnet Mask (binary)	Subnet Mask (decimal)	Prefix Notation (/x)
250	11111111.11111111.11111111.00000000	255.255.255.0	/24
25	[] . [] . [] . []	[]	[]

8.1.5 Benefits of Variable Length Subnetting Masking

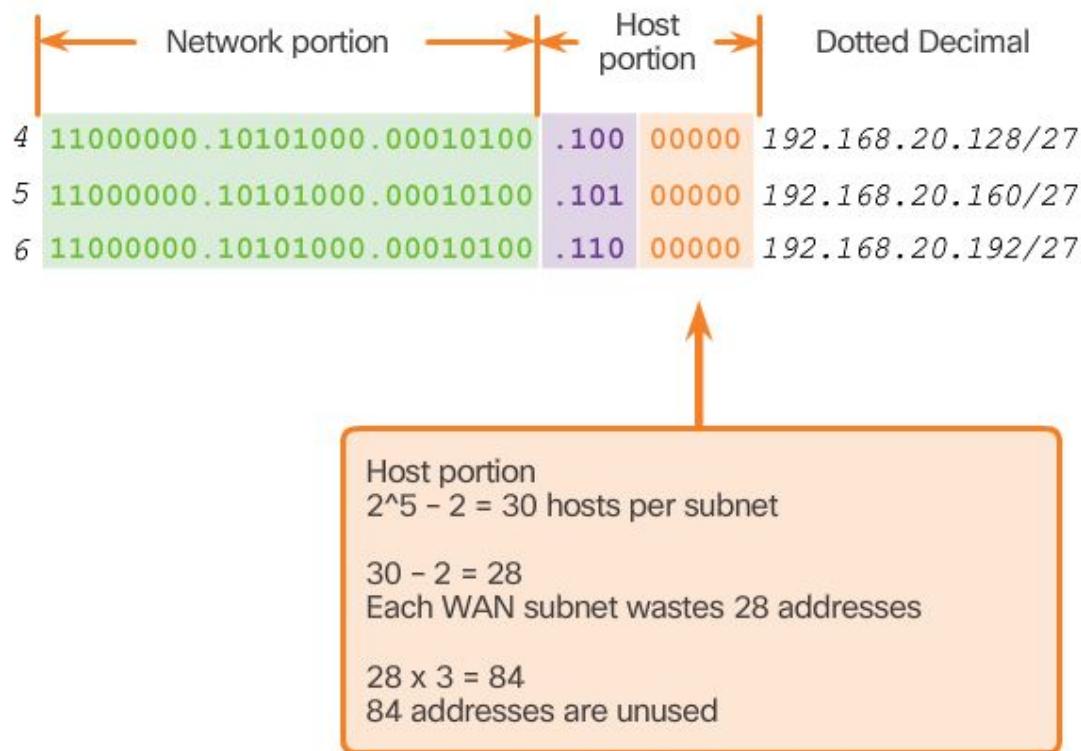

8.1.5.1 Traditional Subnetting Wastes Addresses

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.1 Traditional Subnetting Wastes Addresses

Unused Addresses on WAN Subnets

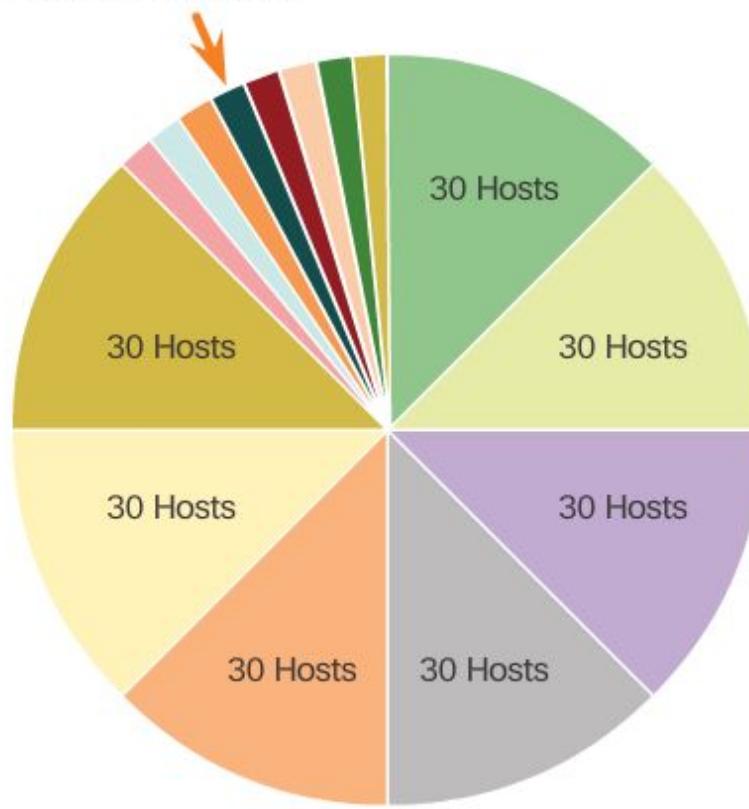

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.2 Variable Length Subnet Masks

Subnets of Varying Sizes

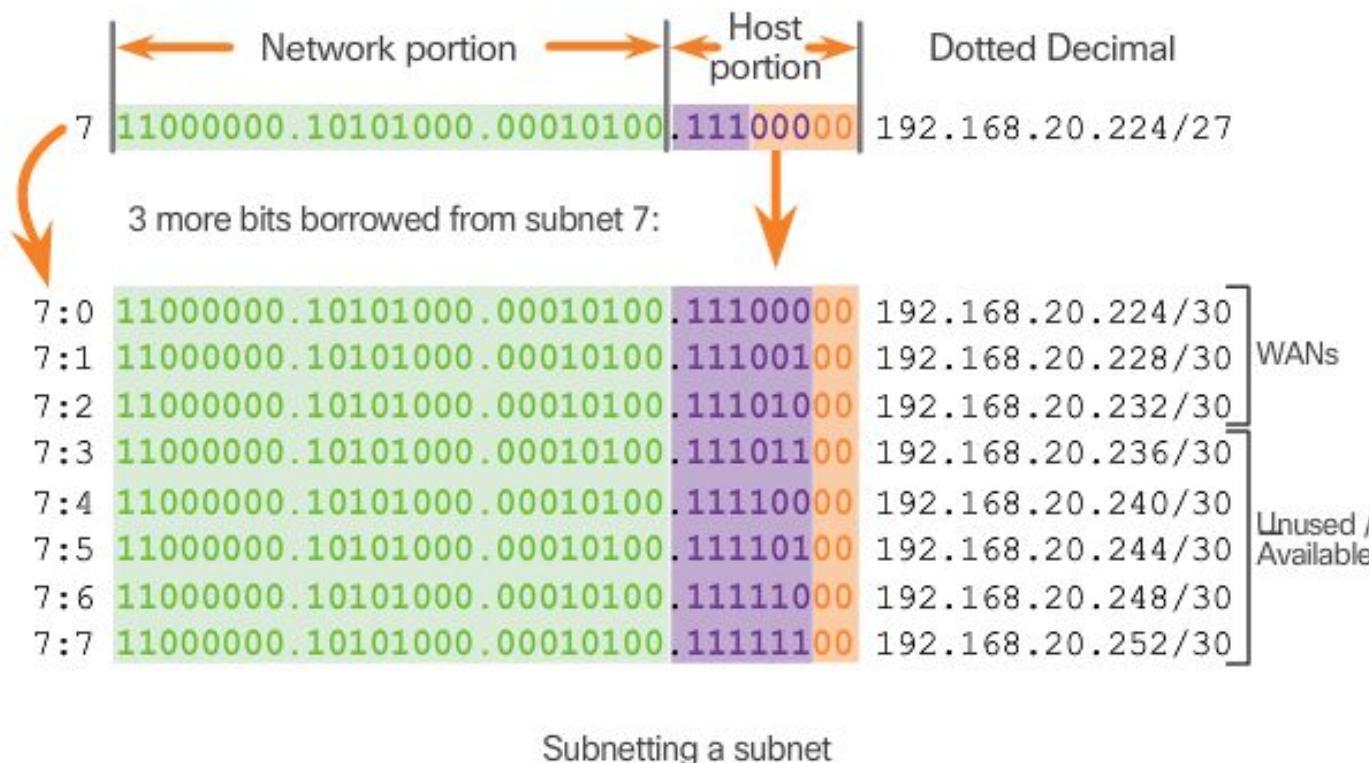

One subnet was further divided to create 8 smaller subnets of 4 hosts each

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.3 Basic VLSM

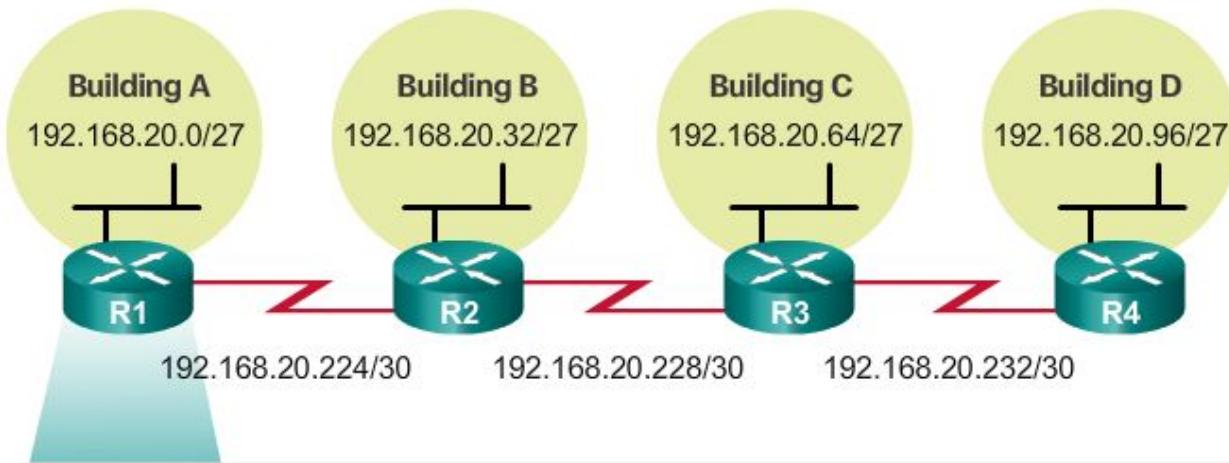

VLSM Subnetting Scheme

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.5 VLSM in Practice

Network Topology: VLSM Subnets

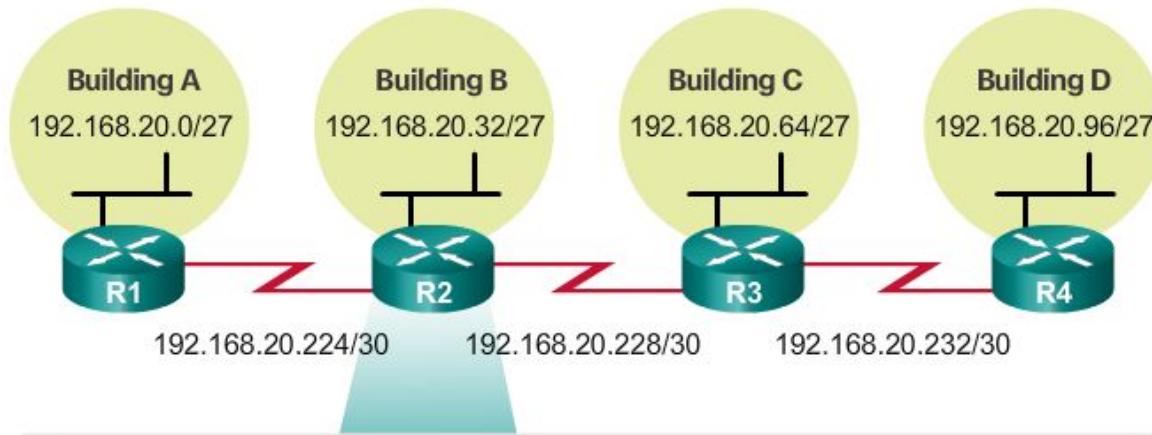

```
R1(config)# interface gigabitethernet 0/0
R1(config-if)# ip address 192.168.20.1 255.255.255.224
R1(config-if)# exit
R1(config)# interface serial 0/0/0
R1(config-if)# ip address 192.168.20.225 255.255.255.252
R1(config-if)# end
R1#
```

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.5 VLSM in Practice (cont.)

Network Topology: VLSM Subnets

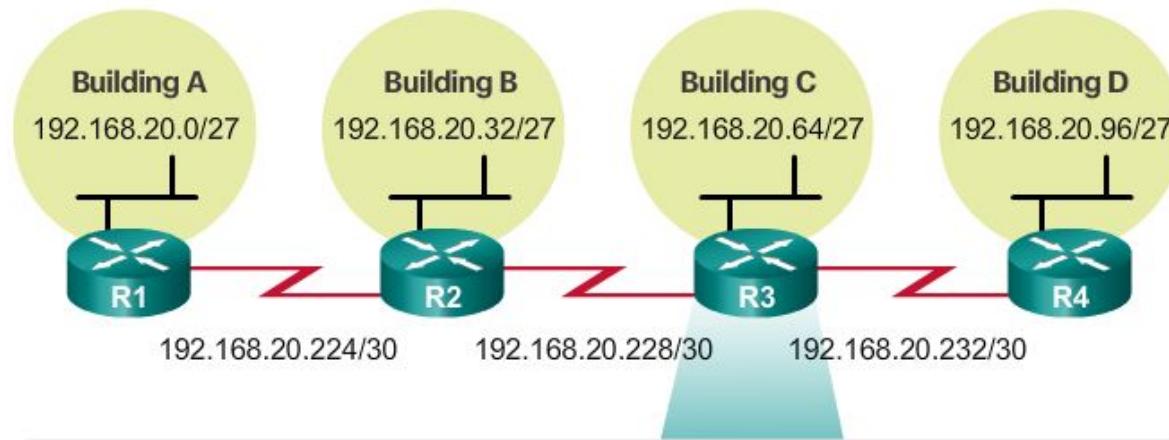

```
R2(config)# interface gigabitethernet 0/0
R2(config-if)# ip address 192.168.20.33 255.255.255.224
R2(config-if)# exit
R2(config)# interface serial 0/0/0
R2(config-if)# ip address 192.168.20.226 255.255.255.252
R2(config-if)# exit
R2(config)# interface serial 0/0/1
R2(config)# ip address 192.168.20.229 255.255.255.252
R2(config-if)# end
R2#
```

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.5 VLSM in Practice (cont.)

Network Topology: VLSM Subnets

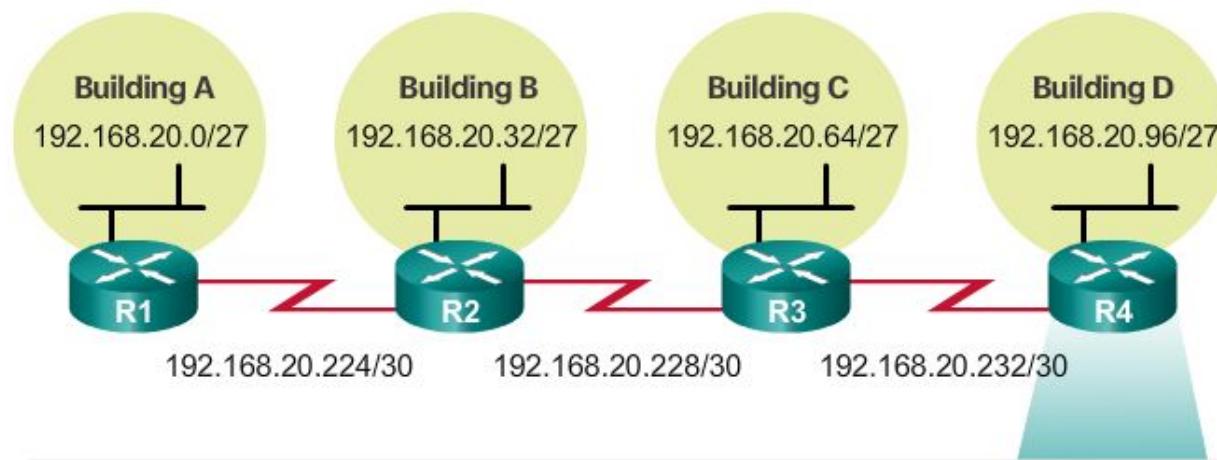

```
R3(config)# interface gigabitethernet 0/0
R3(config-if)# ip address 192.168.20.65 255.255.255.224
R3(config-if)# exit
R3(config)# interface serial 0/0/0
R3(config-if)# ip address 192.168.20.230 255.255.255.252
R3(config-if)# exit
R3(config)# interface serial 0/0/1
R3(config-if)# ip address 192.168.20.233 255.255.255.252
R3(config-if)# end
R3#
```

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.5 VLSM in Practice (Cont.)

Network Topology: VLSM Subnets

```
R4(config)# interface gigabitethernet 0/0
R4(config-if)# ip address 192.168.20.97 255.255.255.224
R4(config-if)# exit
R4(config)# interface serial 0/0/0
R4(config-if)# ip address 192.168.20.234 255.255.255.252
R4(config-if)# end
R4#
```

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.6 VLSM Chart

VLSM Subnetting of 192.168.20.0/24

	/27 Network	Hosts
Bldg A	.0	.1 - .30
Bldg B	.32	.33 - .62
Bldg C	.64	.65 - .94
Bldg D	.96	.97 - .126
Unused	.128	.129 - .158
Unused	.160	.161 - .190
Unused	.192	.193 - .222
	.224	.225 - .254

	/30 Network	Hosts
WAN R1-R2	.224	.225 - .226
WAN R2-R3	.228	.229 - .230
WAN R3-R4	.232	.233 - .234
Unused	.236	.237 - .238
Unused	.240	.241 - .242
Unused	.244	.245 - .246
Unused	.248	.249 - .250
Unused	.252	.253 - .254

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.6 Practicing VLSM

Table 1 uses regular subnetting to accommodate the network shown.

Table 2 uses VLSM to further subnet the network

192.168.5.0-	
192.168.5.63	
/26	
255.255.255.192	
192.168.5.192-	
192.168.5.255	
192.168.5.64-	
192.168.5.127	

192.168.5.0/24 Table 1 - First Subnets Calculation	
Calculate 50 users per subnet	
New Subnet Mask (decimal)	
First Prefix notation	
First full subnet range	192.168.5.0/24 Table 2 - VLSM Calculation
Use Table 1's second full subnet range and VLSM to calculate for 20 users per subnet.	
Second full subnet range (/26) from Table 1	
New VLSM Subnet Mask (decimal)	
VLSM Prefix notation	
First full VLSM subnet range	
Last full VLSM subnet range	

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.6 Practicing VLSM

Table 2 uses VLSM to further subnet the network

192.168.5.0/24 Table 1 - First Subnets Calculation	
Calculate 50 users per subnet	
New Subnet Mask (decimal)	255.255.255.192 
First Prefix notation	/26 
First full subnet range	192.168.5.0- 192.168.5.63 
Second full subnet range	192.168.5.64- 192.168.5.127 
Last full subnet range	192.168.5.192- 192.168.5.255 

8.1.5 Benefits of Variable Length Subnetting Masking

8.1.5.6 Practicing VLSM

Table 1 uses regular subnetting to accommodate the network shown.

192.168.5.0/24 Table 2 - VLSM Calculation	
Use Table 1's second full subnet range and VLSM to calculate for 20 users per subnet.	
Second full subnet range (/26) from Table 1	192.168.5.64- 192.168.5.127
New VLSM Subnet Mask (decimal)	255.255.255.224
VLSM Prefix notation	/27
First full VLSM subnet range	192.168.5.64- 192.168.5.95
Last full VLSM subnet range	192.168.5.96- 192.168.5.127

Section 8.2: Addressing Schemes

Upon completion of this section, you should be able to:

- Implement a VLSM addressing scheme.

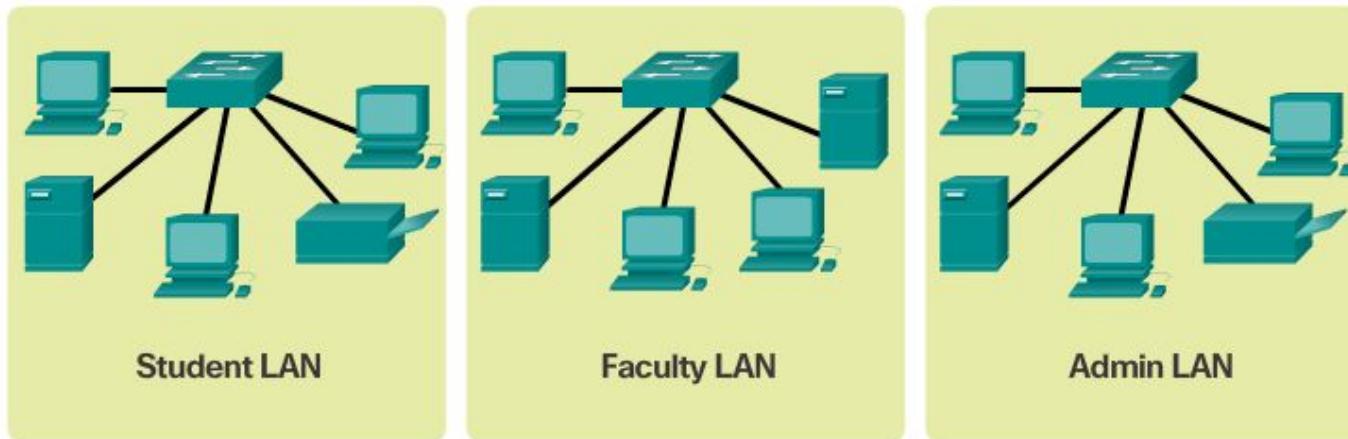

Topic 8.2.1: Structured Design

8.2.1 Structured Design

8.2.1.1 Network Address Planning

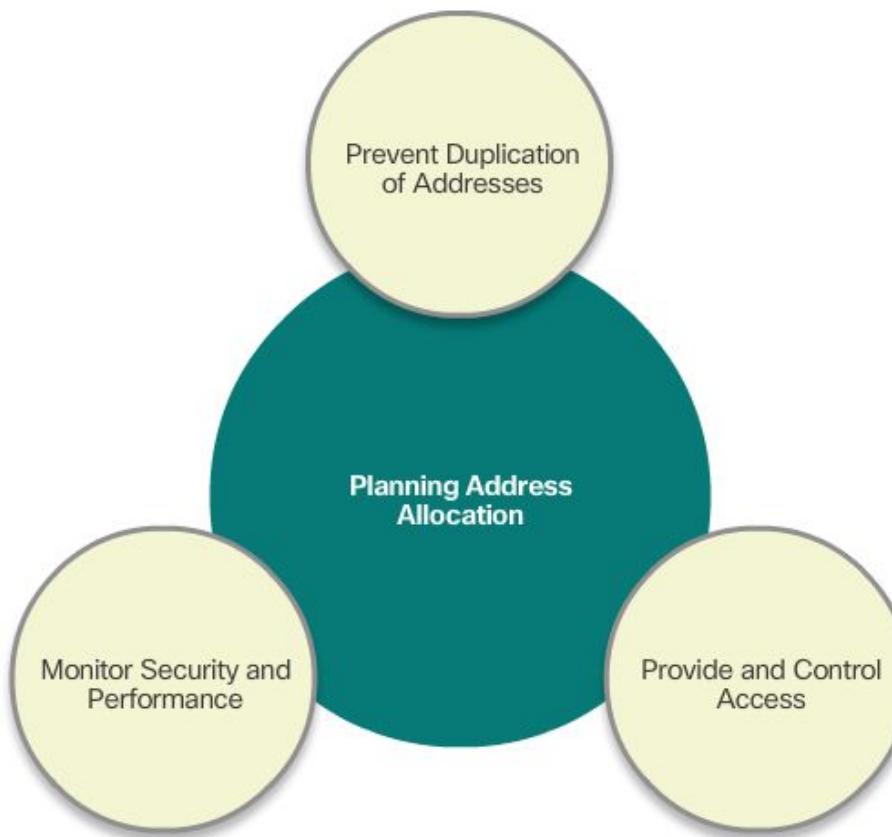

Planning IP Address Assignment

Planning requires decisions on each subnet in terms of size, the number of hosts per subnet, and how host addresses will be assigned.

8.2.1.2 Planning to Address the Network

Primary Considerations when Planning Address Allocations

8.2.1.3 Assigning Addresses to Devices

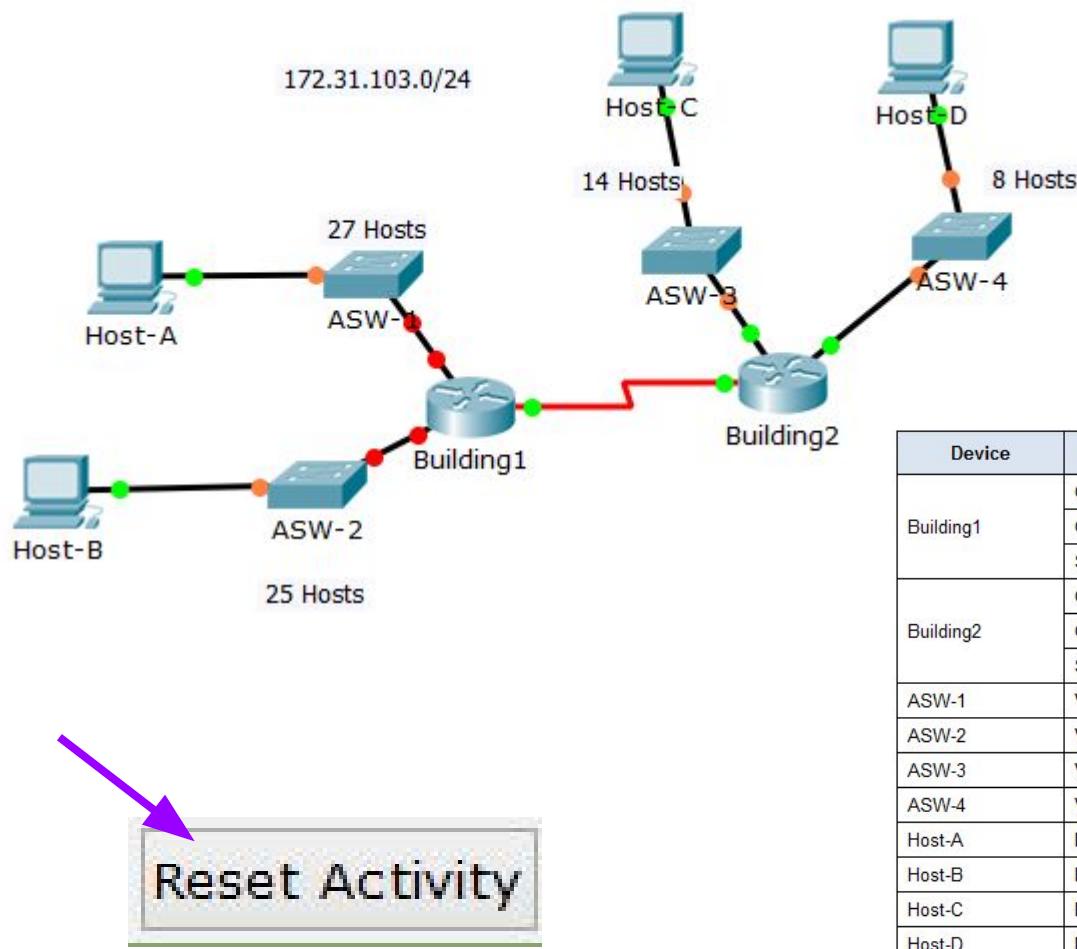

IP Address Ranges

Network: 192.168.1.0/24

Use	First	Last
Host Devices	.1	.229
Servers	.230	.239
Printers	.240	.249
Intermediary Devices	.250	.253
Gateway (router LAN interface)	.254	

8.2.1 Structured Design

8.2.1.4 PT - Designing and Implementing a VLSM Addressing

Device	Interface	IP Address	Subnet Mask	Default Gateway
Building1	G0/0			N/A
	G0/1			N/A
	S0/0/0			N/A
Building2	G0/0			N/A
	G0/1			N/A
	S0/0/0			N/A
ASW-1	VLAN 1			
ASW-2	VLAN 1			
ASW-3	VLAN 1			
ASW-4	VLAN 1			
Host-A	NIC			
Host-B	NIC			
Host-C	NIC			
Host-D	NIC			

Section 8.3: Design Considerations for IPv6

Upon completion of this section, you should be able to:

- Explain how to implement IPv6 address assignments in a business network.

Topic 8.3.1: Subnetting an IPv6 Network

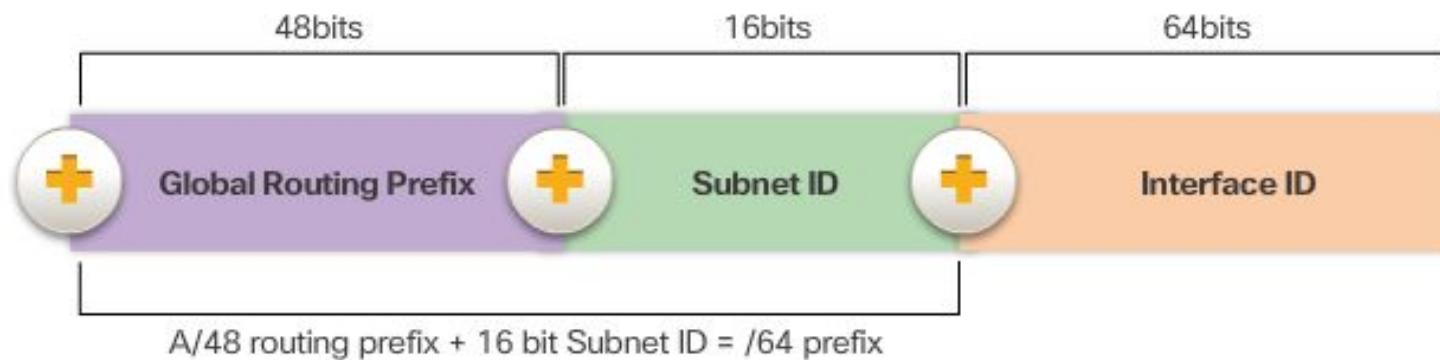

8.3.1 Subnetting an IPv6 Network

8.3.1.1 The IPv6 Global Unicast Address

The IPv6 global unicast address normally consists of a /48 global routing prefix, a 16 bit subnet ID, and a 64 bit interface ID.

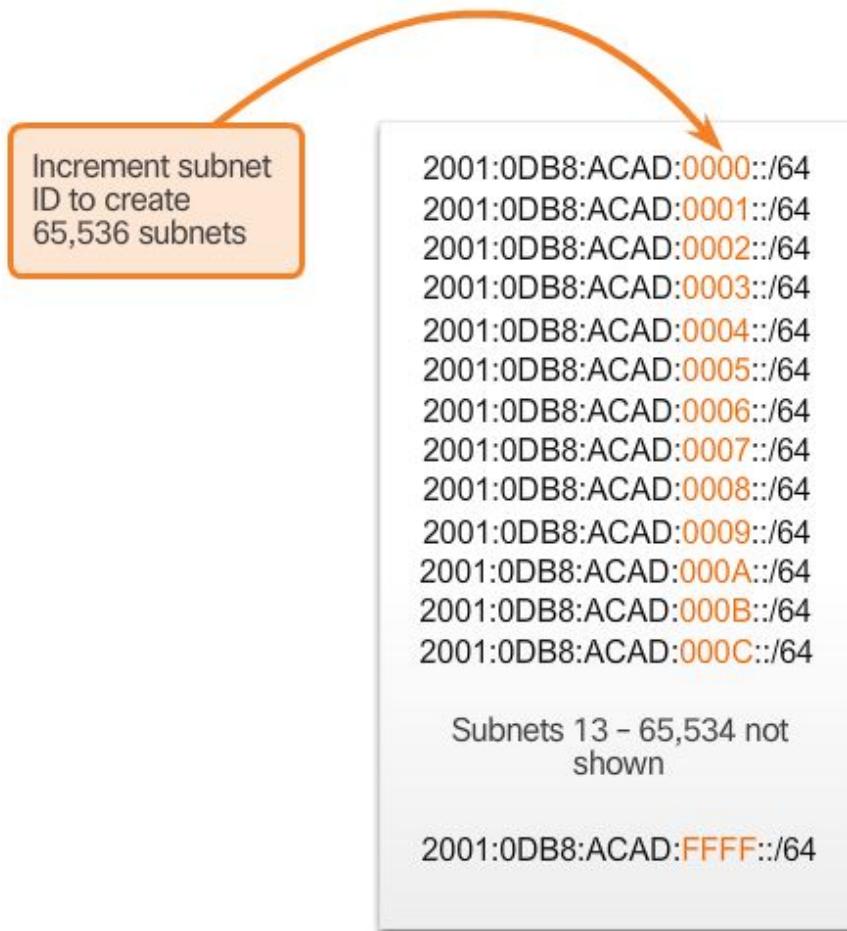

IPv6 Global Unicast Address Structure

8.3.1 Subnetting an IPv6 Network

8.3.1.2 Subnetting Using the Subnet ID

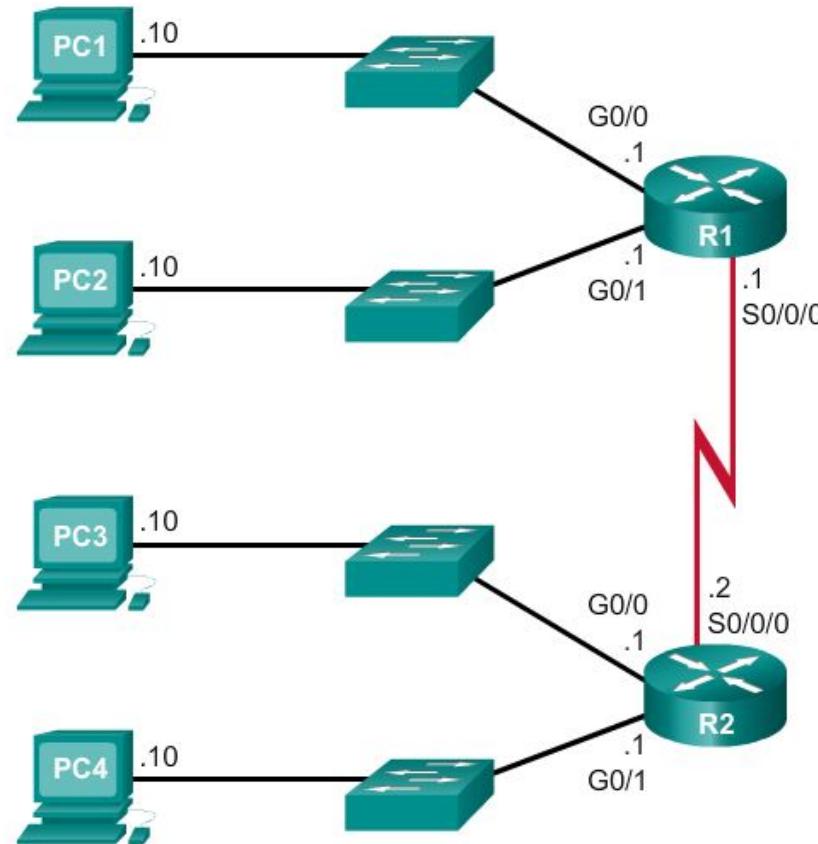

Address Block: 2001:0DB8:ACAD::/48

8.3.1 Subnetting an IPv6 Network

8.3.1.3 IPv6 Subnet Allocation

Example Topology

8.3.1.3 IPv6 Subnet Allocation (cont.)

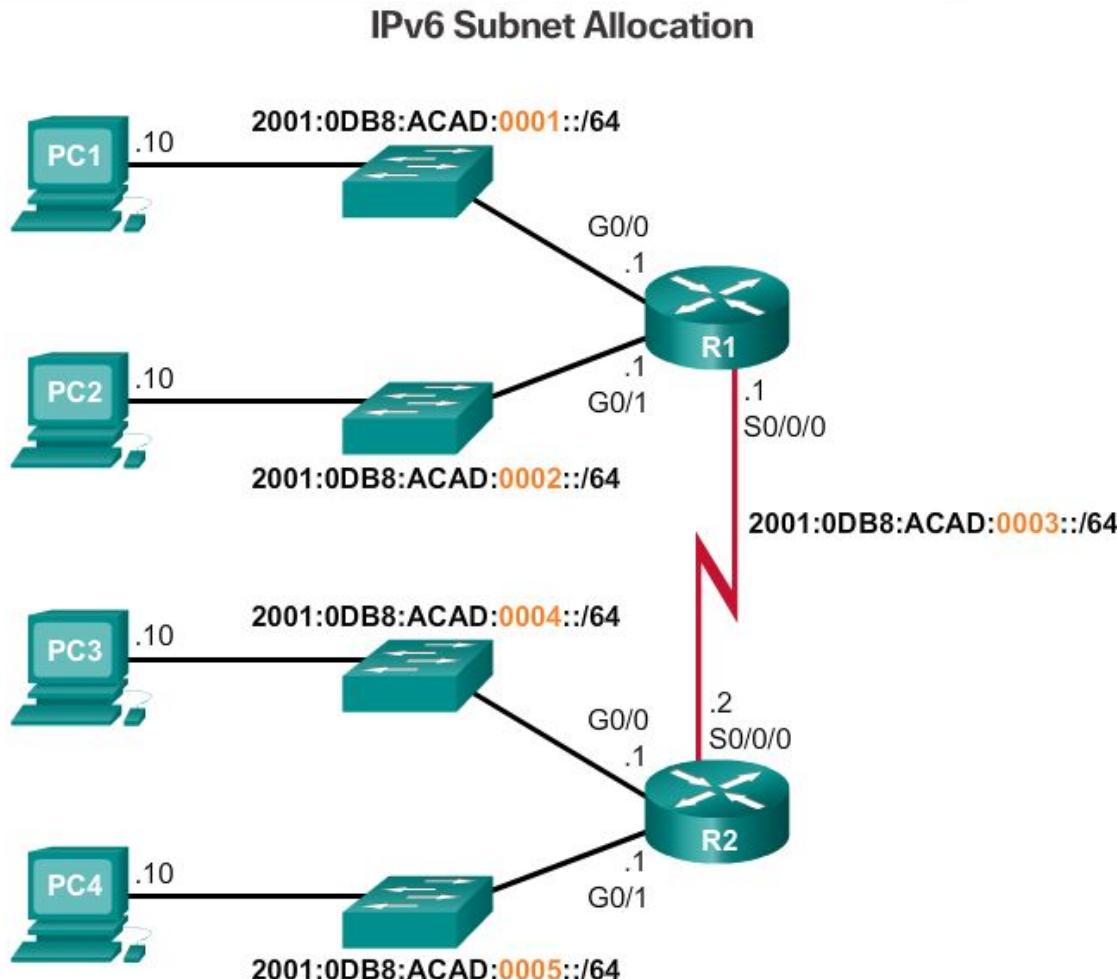

Address Block: 2001:0DB8:ACAD::/48

5 subnets allocated
from 65,536
available subnets

2001:0DB8:ACAD:**0000**::/64
2001:0DB8:ACAD:**0001**::/64
2001:0DB8:ACAD:**0002**::/64
2001:0DB8:ACAD:**0003**::/64
2001:0DB8:ACAD:**0004**::/64
2001:0DB8:ACAD:**0005**::/64
2001:0DB8:ACAD:**0006**::/64
2001:0DB8:ACAD:**0007**::/64
2001:0DB8:ACAD:**0008**::/64
⋮
2001:0DB8:ACAD:**FFFF**::/64

8.3.1 Subnetting an IPv6 Network

8.3.1.3 IPv6 Subnet Allocation (cont.)

8.3.1 Subnetting an IPv6 Network

8.3.1.3 IPv6 Subnet Allocation (cont.)

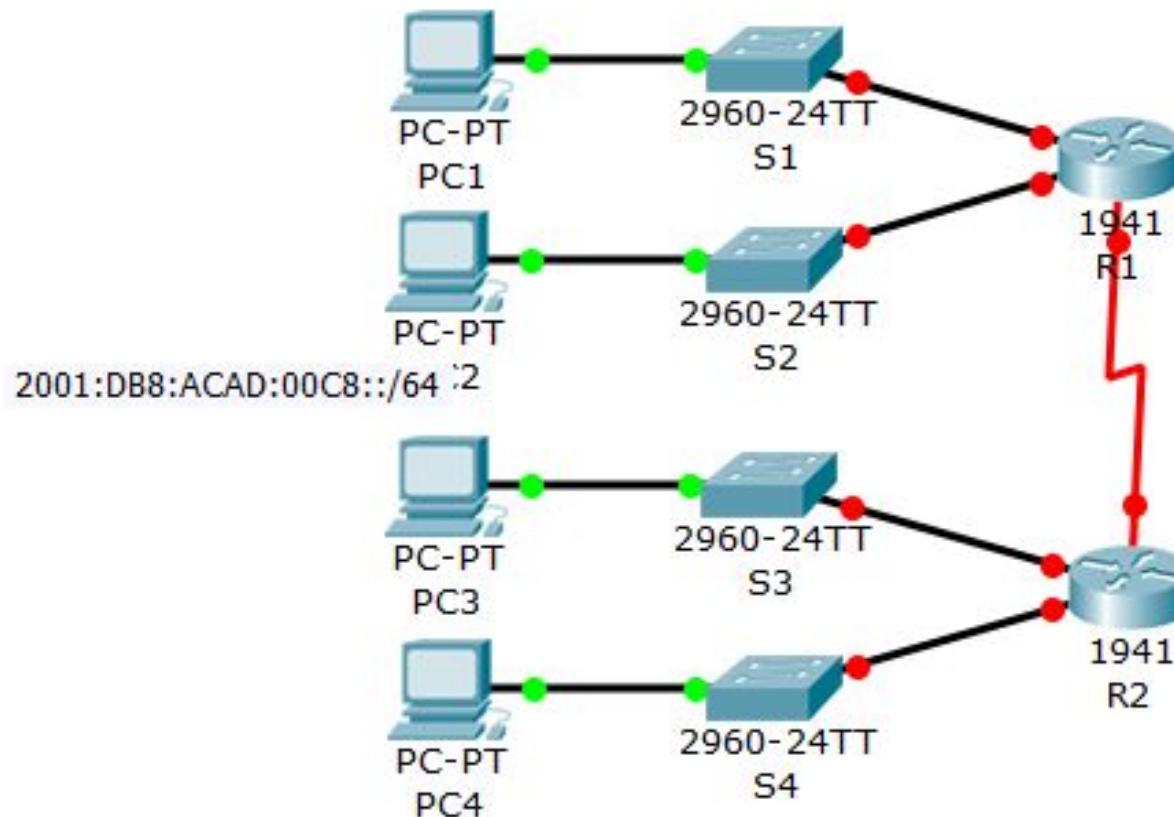

IPv6 Address Configuration

```
R1(config)# interface gigabitethernet 0/0
R1(config-if)# ipv6 address 2001:db8:acad:1::1/64
R1(config-if)# exit
R1(config)# interface gigabitethernet 0/1
R1(config-if)# ipv6 address 2001:db8:acad:2::1/64
R1(config-if)# exit
R1(config)# interface serial 0/0/0
R1(config-if)# ipv6 address 2001:db8:acad:3::1/64
R1(config-if)# end
R1#
```

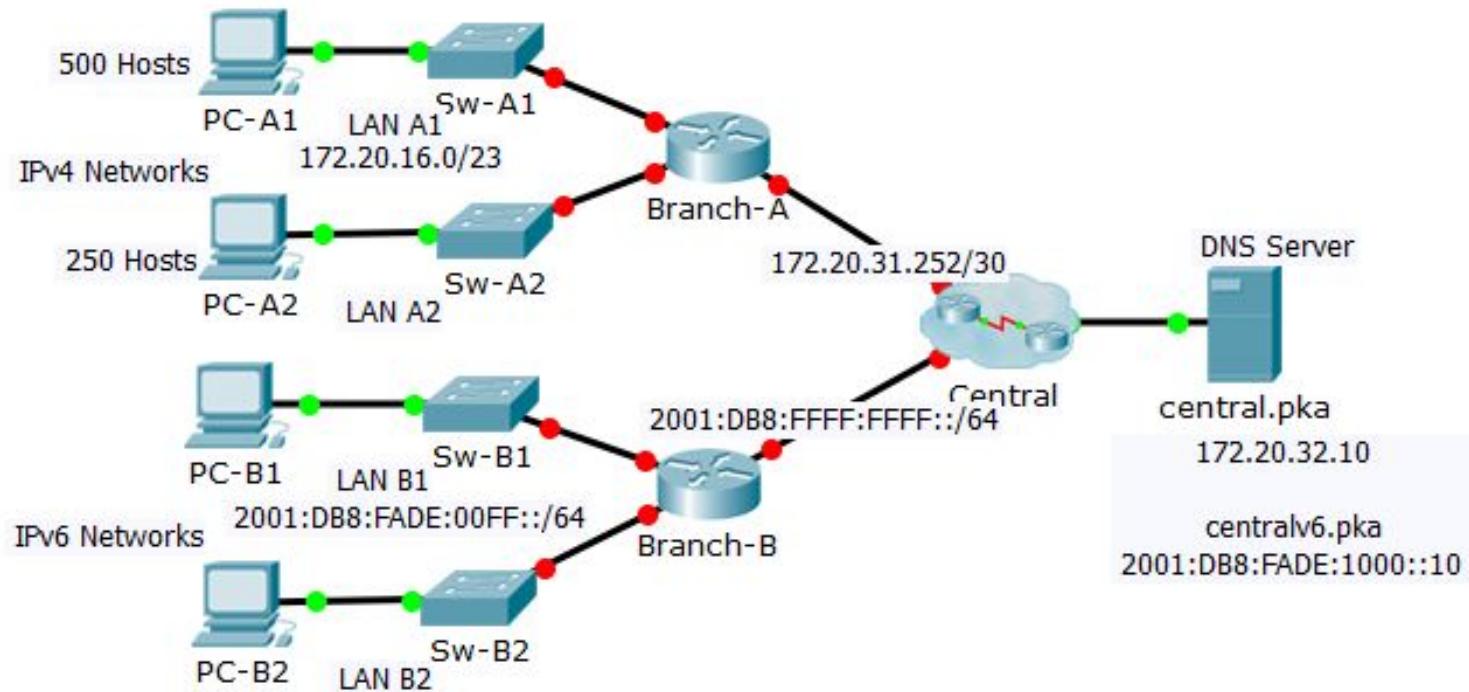

8.3.1 Subnetting an IPv6 Network

8.3.1.4 PT - Implementing subnetted IPv6 addressing scheme

8.4 Summary

8.4.1.2 PT - Skills integration challenge

Thank you.
